EDUCATION

Georgia Institute of Technology

Dec 2026

Bachelor of Science in Computer Science

GPA: 3.6/4.0

- Concentration: Artificial Intelligence, Information Internetworks
- Relevant Coursework: Machine Learning, Systems and Networks, Database Systems, Computer Networking

EXPERIENCE

Incoming Software Engineer Intern

June 2026 – Aug 2026

Capital One

McLean, VA

- Selected for Capital One's competitive Technology Internship Program (Summer 2026).

Bulk Power Operations Intern

Aug 2025 – Dec 2025

Southern Company

Birmingham, AL

- Reduced data retrieval time by ~97% by developing a Python CLI tool leveraging the AVEVA PI Web API, replacing a manual Excel-based ingestion process with automated shell scripts for monthly analyses.
- Engineered a real-time monitoring system for high-volatility data center loads, enabling predictive generation dispatch that reduced Area Control Error (ACE) swings and prevented frequency-based grid instability.
- Established the organization's top-performing winter peak demand forecast by implementing an XGBoost model with tailored meteorological features and data center load-growth analysis, reducing MAPE by 47%.

Advanced Analytics Intern

May 2025 – Aug 2025

UCB

Smyrna, GA

- Enabled identification of undiagnosed patients and risk flagging by building a BERT-based model that encoded longitudinal claims data into dense embeddings, supporting patient journey clustering across large populations.
- Strengthened risk assessment for an anti-seizure medication by developing a survival analysis model with left-truncation and right-censoring corrections, benchmarking internal outcomes against real-world evidence.
- Validated drug usage patterns for a rare pediatric epilepsy disorder by running subpopulation analyses across Snowflake, surfacing prescribing trends that informed commercial strategy.

Software Engineer Intern

May 2024 – Aug 2024

The Parker Avery Group

Atlanta, GA

- Built an AI analytics team agent mapped to client business semantics, letting executives query metrics in natural language and auto-generate dashboards, accelerating decision-making and reducing analytics backlog.
- Resolved errors in forecast bias and accuracy queries by curating a RAG-driven Text-to-SQL dataset of validated natural language-to-PostgreSQL pairs, increasing agent query accuracy by 16%.
- Optimized large-scale competitor product matching by migrating sequential embedding workflows to OpenAI's Batch API, reducing costs by 50% and accelerating throughput for thousands of SKUs.

PROJECTS

Enhanced Spotify Wrapped | *Java, Android SDK, Firebase, GitHub Actions, Figma*

- Built an Android app using the Spotify Web API that delivers personalized music recaps, tailored recommendations, and real-time AI-powered conversations with users' favorite artists.
- Integrated Firebase Authentication with OAuth 2.0 to manage Spotify token exchange and session persistence, securing user credentials across sessions.
- Automated build validation and deployment with a GitHub Actions CI/CD pipeline, reducing integration errors across a multi-sprint development cycle.

TECHNICAL SKILLS

Languages: Python, Java, C, SQL, HTML, CSS

Libraries/Frameworks: LangChain, Scikit-learn, XGBoost, PyTorch, Transformers, NumPy, Pandas, Matplotlib

Development Tools: Docker, Git, Jira, Figma, Wireshark, Power BI

Cloud/Databases: Databricks, Snowflake, PostgreSQL, MySQL, Firebase, Milvus, AVEVA PI System
